

Daily Report — 4 July 2026

Everything delivered since the 2–4 July report — a rebuilt dashboard attention panel, professional printing across projects, cleaner Sales & Finance screens, real Project Notes, and smoother data entry.

Period covered: 4 July → 6 July 2026 · **Prepared by:** W. Nyagawa · **Company:** BJP Technologies Co. Ltd ·
Continuing from the 2–4 July report

8

dashboard alert types now backed by live, real-time counts

7

one-click "Go to source" views, each filtered to exactly the flagged items

3

hidden counting errors found and corrected

13→1

stale "document expiry" alerts replaced by the real figure

The "System requires your attention" panel, rebuilt to be trustworthy

The dashboard's yellow alert panel — "You have N pending notifications" — was showing everything at once, some of the numbers were not real, and clicking an item often dropped you on a whole list instead of the thing that needed attention. It has been rebuilt from the ground up so that **every number is true, and every click takes you straight to the work.**

1. Tidy, grouped view — open only what you need

Clicking **View Details** now opens a neat, collapsible list of *categories* (Inventory & Products, Invoices, Goods Receipt Pending, and so on), each showing a **count** of items that need attention — nothing is dumped on screen until you ask for it.

2. Two clear actions on every category

- **View here** — expands the list of items right on the dashboard, exactly as before.
- **Go to source** — jumps to that module's real page, **filtered to show only the items that need attention** — the same number you saw on the badge.

3. Every item opens the exact record

Previously, clicking an alert could send you to a general list. Now each item goes straight to the right place:

- **Goods Receipt Pending** → opens the **Receive-Goods screen for that exact purchase order.**
- **Pending leave** → opens that specific leave; **quotations** and **tenders** → their own record.
- **Over-credit customer** → that customer; **negative stock** → that product; **overdue invoice / low stock** → their detail view.

BEFORE

A wall of mixed alerts, some numbers inflated or stale, and links that landed you on a full list to hunt through.

NOW

Grouped counts you can trust, a filtered "Go to source" for each, and per-item links that open the exact record.

Self-correcting by design. Because the counts are now live readings of the actual data (not saved messages), the moment you fix the underlying issue — restock an item, receive goods, renew a

document — it **disappears from the count on its own**. No manual clearing needed.

WHERE IT WAS APPLIED

Seven categories wired, each verified number-for-number

For every category below, we confirmed on the live system that the badge count equals exactly what the filtered page shows when you click "Go to source".

Inventory & Products

Low / out / negative stock and items expiring within 30 days.

✓ Count matches page (13 = 13)

Invoices & Payments

Overdue invoices — past due with an outstanding balance.

✓ Count matches page (6 = 6)

Goods Receipt Pending

Purchase orders past their expected date with nothing received yet.

✓ Count matches page (6 = 6)

Customers Over Credit Limit

Unpaid balance above the customer's credit limit.

✓ Count matches page (1 = 1)

Expiring Quotations

Quotations expiring within 5 days, still open.

✓ Own count & source

Expiring Tenders

Tenders whose submission deadline is within 7 days.

✓ Own count & source

Cash-register shifts, bank reconciliation, HR leave and payroll remain **page-level** — the action happens directly on that page, so there is no separate "one record" to open.

Three hidden miscounts, found and corrected

Building the filtered views exposed three genuine counting problems that had been quietly under- or over-stating the figures. All three are now fixed and consistent.

- **Overdue invoices were undercounted.** The system automatically re-labels past-due invoices as "overdue", but the dashboard was only counting a narrow set of labels — so re-labelled and "reviewed" invoices silently vanished from the number. Overdue is now defined one consistent way everywhere: *not paid, cancelled or draft, past the due date, with a balance*. The real figure rose from **1 to 6**.
- **Customer credit exposure used the wrong basis.** A customer's "amount owed" now uses the true outstanding balance (invoice total minus what's been paid) across all unpaid invoices — so partial payments count correctly and no over-limit customer is missed.
- **"Document expiry" was counting stale reminders.** The badge showed **13** based on old, unread reminder messages — but only **1** document is actually expiring. It now reads the document library directly, so it shows the real number and updates itself when a document is renewed.

What this means for you: the number on the alert panel is now a number you can act on. If it says 6, there are 6 — and clicking through shows you those exact 6.

Sales, Finance and Notes screens grew up

Several sections inside a project's screen were upgraded from basic lists into full, searchable, sortable tables — with a card view that automatically takes over on phones.

- **Sales section** — Sales Orders, Interim Payment Certificates (IPC) and Invoices became proper tables with search, sorting and paging, plus a tidy mobile card view.
- **Finance section** — Expenses, Payment Vouchers and Budget items received the same treatment: searchable tables on desktop, clean cards on mobile.
- **NIP list** — an **Item Code** column was added so the in-project list matches the main page.

Real Project Notes (replacing a mock-up)

The project **Notes** tab used to be a dummy — "Add Note" only showed a success message and saved nothing. It is now a real, working notes feature:

- Notes are genuinely saved, listed, and can be managed.
- Professional **filtering, pagination and appearance**, in line with the rest of the system.
- A proper **print header** (company name, project, contract number) so a printed notes sheet looks official.

Everything now prints the way it looks on screen

Several project screens printed badly — the data came out as a narrow strip of phone-style cards squeezed to the left with an empty page beside it, and some sections had no header at all. The printing was corrected across the board.

- **Sales Orders, Invoices, IPC** and the **Finance tables** (Budget, Vouchers, Expenses) now print the **full wide table** — not the phone cards — with the on-screen "Actions" buttons hidden and no more blank extra page.
- **Bills** and **Inventory** tabs gained the professional **print header** (logo, company name, project, contract number) the other tabs already had.
- The **Budget** print no longer shows the little empty expand column.
- **Warehouse "View Details / Stock History"** — the header used to repeat on every page and push the content onto page 2. It now appears **once at the top of page one, with the content right beneath it**.

Fewer dead-ends when adding records

- **Project expenses** — the Expense Type list now respects which types belong to projects (Admin, Fixed, Operating are available and the field is optional), instead of a hard-coded list; and saving an expense now **always tells you** if something fails, rather than failing silently.
 - **Products** — a zero price no longer blocks saving, the form always reports the outcome, and duplicate SKU / product codes are caught up front.
 - **Sales orders** — the salesperson is now set automatically to the logged-in user on create and edit.
 - **Navigation** — a clean "Back to Project" path was added for Supplier, Sub-contractor and Staff screens, and a dead, unused staff wizard was removed.
-

Everything delivered since the 2–4 July report

Area	What changed	Benefit to the business
Dashboard alerts	Rebuilt "System requires your attention" — grouped counts, "View here" + "Go to source", per-item links to the exact record	Alerts you can trust and act on in one click
Filtered sources	7 categories open filtered to only the flagged items; each verified badge = page	Go straight to exactly what needs doing
Counting fixes	Overdue-invoice, customer-credit and document-expiry counts corrected & unified	Real numbers, no silent under/over-counting
Project Sales & Finance	Sales Orders, IPC, Invoices, Expenses, Vouchers, Budget → searchable tables + mobile cards; NIP Item Code column	Easier to find, sort and use on any device
Project Notes	Replaced the non-working mock-up with real notes: save, filter, paginate, print header	A genuine, usable notes trail per project
Printing	Sales/Invoices/IPC/Finance print as full tables; Bills & Inventory headers; single-page warehouse stock header	Clean, professional printouts everywhere
Data entry	Expense types, product save/price/duplicate guards, auto salesperson, cleaner navigation	Fewer dead-ends and silent failures

BMS — Business Management System. Report for 4 July 2026, continuing from the 2–4 July progress report. **All changes are live on the production system.**
