Transaction-Safety Sweep — Webroot Security + Atomic Money Writes

PRs #1078–#1083 · 7 commits ·
capstone test suite

The largest single body of work today. Started from a question: "is every multi-step money write in this system actually safe if it fails halfway?" The answer was no in several places, and the webroot itself had a much bigger problem — 284 unauthenticated scripts sitting at the site root. Both were closed out in one coordinated sweep across six branches, capped by an end-to-end integrity test that proves the four statutory reports still balance after all of it.

SECURITY

284 Unauthenticated Scripts Quarantined Out of the Public Webroot

Finding: Of 299 top-level `.php` files, only 15 are real entry points (verified against the `roots.php` router, every JS/fetch call, includes, CI and deploy). The other 284 were pre-migration-system dev/debug/data-fix scripts (`check_*`, `debug_*`, `fix_*`, `alter_*` ...) reachable over plain HTTP with **no authentication** — several would run `ALTER TABLE / UPDATE` against the production database for anyone who hit the URL.

Fix: All 284 moved to `scripts/legacy/` via `git mv` (full history preserved), slated for permanent deletion one stable release after merge. `.htaccess` now denies HTTP access to `scripts/`, `tests/`, `cron/`, `migrations/` (except the login-guarded `migrations/status.php` dashboard). `migrations/runner.php` is now CLI-only (`PHP_SAPI` guard) — deploy over SSH unaffected.

Test: `tests/test_webroot_quarantine_cli.php` — 9/9 passing (webroot whitelist, `.htaccess` rules, runner CLI guard, `ajax_*` endpoints still authenticate).

Status: merged to `develop` (PR #1078) — not yet promoted to `main`.

FOUNDATION

80 Tables Silently Ignoring Rollbacks — Converted MyISAM → InnoDB

Bug: 80 tables (`payroll` , `payment_vouchers` , `bank_transactions` , `pos_payments` , `product_stocks` , `loans` , ...) were still MyISAM, a storage engine with no transaction support — every existing `beginTransaction()` / `commit()` touching them was doing nothing on failure.

Fix: `migrations/2026_07_01_convert_myisam_to_innodb.php` — criteria-based, idempotent, converts with `ROW_FORMAT=DYNAMIC` (fixes legacy `row_format=FIXED` tables that would otherwise fail under `innodb_strict_mode`). This underpins every atomicity fix below.

FIX

Payroll — Multi-Step Writes Made Atomic

Bug: Payroll payout/edit endpoints ran 3–5 dependent writes (status update → GL posting → bank register/accrual reversal → re-post) with no transaction — a mid-sequence failure could leave some employees paid with GL posted and others not, or an amount changed with its accrual reversed but never reposted.

Fix: `api/bulk_update_payroll_status.php` — each employee's payment is now one transaction per row; a failure rolls that row back completely and is reported in the response, other rows proceed; a null GL posting is now fatal for the row. `api/update_payroll.php` , `api/operations/process_project_payroll.php` similarly wrapped.

Test: `tests/test_payroll_tx_atomicity_cli.php` — 16 checks, all 8 existing payroll suites still pass.

FIX

IPC / Invoice / Voucher — Multi-Step Writes Made Atomic

Bug: Worst case found — IPC invoicing ran `INSERT invoices` then `UPDATE interim_payment_certificates` with no transaction. A failure between the two left an invoice with no IPC link, and a retry created a **duplicate invoice for the same certificate**.

Fix: `api/operations/create_invoice_from_ipc.php` — number allocation + invoice insert + IPC link are one transaction, link update guarded on `invoice_id IS NULL` so two concurrent requests can't both invoice the same certificate. `update_ipc_status.php` , `save_ipc.php` , `api/account/save_voucher.php` similarly wrapped.

Test: `tests/test_ipc_invoice_tx_cli.php` — 11 checks, all 17 IPC/voucher/invoice suites pass.

FIX

Warehouse Delete — Cascade Made Atomic, Stock History Preserved

Bug: The delete cascade (`product_stocks` → `stock_movements` → `locations` → `soft-delete`) ran as 4 separate statements with no transaction — a mid-cascade failure left stock rows deleted but the warehouse still alive. It also **hard-deleted** `stock_movements` , destroying the stock in/out audit trail, while only soft-deleting the warehouse itself.

Fix: `ajax_delete_warehouse.php` and the duplicate delete branch in `app/bms/stock/warehouses.php` now cascade in one transaction; `stock_movements` is no longer deleted — history preserved.

Test: `tests/test_warehouse_delete_tx_cli.php` — 12 checks: live forced mid-cascade failure leaves everything untouched, live real cascade removes current state, keeps movement history, soft-deletes the warehouse.

FIX

Remaining Multi-Write Endpoints (Stock / CRM / Config) Made Atomic

Final batch — 9 endpoints with genuine multi-step writes and no transaction, now wrapped:

`api/rfq_quick_add_product.php` , `api/crm/move_lead_stage.php` , `bulk_update_leads.php` , `add_activity.php` , `edit_lead.php` , `manage_stage.php` , `api/pos/delete_salary_component.php` , `api/account/save_account.php` , `api/finance/manage_revenue_schema.php` .

Also audited and deliberately left **not** wrapped: update-or-insert endpoints, per-row-reporting bulk import loops,

and get-or-create lookups — a failure there leaves a valid reusable row, not corruption.

Test: `tests/test_multiwrite_tx_coverage_cli.php` — 22 checks, all 26 related CRM/account suites pass.

✓ Capstone: Financial Report Integrity Suite

`tests/test_financial_reports_integrity_cli.php` — 17 checks proving the four statutory reports stay correct after the whole sweep, and guarding them going forward (runs on every push via the pre-push hook): ledger invariant $\Sigma Dr = \Sigma Cr$, Balance Sheet balances (Assets = Liabilities + Equity), TB/P&L/Cash Flow internal consistency, and a **live end-to-end** proof — posts a real Dr Expense / Cr Asset entry, confirms P&L and TB move by exactly that amount, confirms every statement still balances, then removes the entry and re-proves the ledger is balanced.

Standalone Customer LPO Module — LPO → DN(Outbound) → Invoice Chain

PRs #1063, #1076 · 105+ test checks

LPO previously only existed as a modal-based tab inside a customer's detail page with no real approval workflow. Rebuilt to Purchase-Order parity as a full standalone module, wired all the way through to a working document chain: LPO → Delivery Note (Outbound) → Invoice. The Sales menu was reordered to match the natural document flow.

FEAT

LPO Foundation + Three-Approval Workflow

`migrations/2026_07_01_lpo_standalone_foundation.php` adds prepared/reviewed/approved actor+role+timestamp columns and `project_id` to `customer_lpos`; new permission page-key `lpo` (review/approve restricted to Admin + Managing Director).

New standalone pages mirroring the PO module: `lpos.php`, `lpo_create.php`, `lpo_view.php`, `print_lpo.php` — live product search, three-approval trail, matching print letterhead.

`api/customer/save_lpo.php` (unified save, no longer accepts an arbitrary status field), `review_lpo.php`, `approve_lpo.php` replace the deleted `add_lpo.php` / `update_lpo.php`.

FEAT

LPO → DN(Outbound) → Invoice Linkage

`deliveries.party_type` widened to include `'customer'`; `dn_outbound.php` accepts `?lpo_id=` to prefill remaining-to-deliver quantities and locks "Send To" to the LPO's customer.

`api/approve_dn.php` auto-advances the linked LPO to `partially_fulfilled` / `fulfilled` based on delivered-vs-ordered quantities (status only ever advances).

`invoice_create.php` accepts `?delivery=` to prefill from an approved outbound DN, pricing from the matching LPO line falling back to `products.selling_price`; invoice view/print show "DN Ref." / "LPO Ref.". Sales menu reordered: Quotations → Sales Orders → LPO → DN(Outbound) → Invoices → POS → ... → Credit Notes.

FEAT

Warehouse Field Added to LPO and Invoice

Gap: neither `customer_lpos` nor `invoices` had a `warehouse_id` column, so their inventory-product stock figures always fell back to `products.current_stock` (not warehouse-specific).

Fix: added the field to both, project-filtered the same way every other module works — project selected → only

that project's warehouses; no project → only unassigned warehouses. LPO always requires a warehouse (inventory-only document); Invoice requires one only outside Service Invoice mode, and only on create. Test: `tests/test_lpo_invoice_warehouse_cli.php` — schema + wiring checks, live insert/round-trip proof (transaction-wrapped, rolled back).

`tests/test_lpo_module_cli.php`

ALL PASS

105 / 105

Lint, migration content, three-approval gating, LPO↔DN↔Invoice wiring, menu order, live DB state, and a transaction-wrapped live create/review/approve round trip.

CRM Dashboard & Lead Import — Stabilization (5 Bugs)

PRs #1053, #1055, #1057 · 6 commits · 100/100 tests

Yesterday's CRM Professional Upgrade shipped nine feature phases; today closed out the rough edges that only surface once real users click through the dashboard and the CSV import wizard.

BUG 1

Dashboard Widgets Stuck on "Loading..." Forever

Bug: `safeOutput()` is not a global function — it only lived in `pos_dashboard.php`. `crm_dashboard.php`, `crm_campaigns.php`, and `crm_leads.php` all called it without defining it, throwing `ReferenceError` on every render and leaving Recent Leads, Due Activities, Top Performers, and the mobile card view stuck at "Loading..." permanently. KPI cards and charts were unaffected (no `safeOutput` calls there).

Fix: defined the 3-line XSS-escape helper at the top of each file's `<script>` block.

BUG 2

Dashboard Charts Blank — Chart.js Was Never Loaded

Bug: Chart.js was never loaded on the dashboard page. `new Chart()` threw `ReferenceError`, which silently aborted the entire `$.getJSON` callback — leaving all four charts blank *and* all three DataTables unpopulated, not just the charts.

Fix: added the Chart.js 4.4.0 CDN tag before the inline script block.

FEAT

All Three Dashboard Tables Converted to Proper DataTables

Recent Leads, Due/Overdue Activities, and Top Performers moved from raw HTML injection (`.html()`) to real DataTables with an S/No first column — gives sort, search, and pagination for free, and DataTables' own `emptyTable` message replaces the permanent "Loading..." when the API legitimately returns zero rows. Table headers also restyled from black to blue (`table-primary`) for visual consistency with the rest of the app.

BUG 3

CRM Import Leads — Page and API Both 404'd

Bug: `crm/import_leads` and `api/crm/import_leads` were never registered in `roots.php` — the page and API already existed from yesterday's Phase 8 work, only the route entries were missing.

Fix: registered both routes.

BUG 4, 5, 6

CSV Import Wizard — 3 Bugs Once It Was Reachable

Bug 1 — click opened no file dialog: `#csvFile` was nested inside `#dropZone`; a programmatic click on the hidden input bubbled back to the parent div and retriggered the handler, hitting `RangeError: Maximum call stack`. Fixed by moving the input above the drop zone and binding the click in JS instead of inline `onclick`.

Bug 2 — TypeError on empty CSV headers: the column auto-match loop called `h.toLowerCase()` with no null guard; added a `h != null &&` guard before every keyword check.

Bug 3 — upload button stuck disabled after an error: an uncaught exception inside the `$.ajax` success callback skipped the `complete` handler. Wrapped the success body in try/catch so errors show a friendly message and the button always re-enables.

Bonus: drag-and-drop now updates the drop-zone visual on drop (previously only on file-picker select); `dragleave` resets the highlight.

Warehouse & Project-Scope Consistency

PRs #1059, #1060 · 2 commits · 17 tests

Warehouse Dropdown Silently Fell Back to "All Warehouses" in 3 Pages FIX

- ▶ **Rule that should hold everywhere:** project selected → only that project's warehouses; no project selected → only warehouses not linked to any project (never an "all warehouses" fallback). RFQ create, GRN create, DN create, Sales Order create/edit, and the Quotation form already followed this correctly — three pages didn't.
- ▶ `app/bms/purchase/purchase_order_create.php` — removed the fallback-to-all-warehouses that kicked in whenever the strict filter returned zero results.
- ▶ `app/bms/stock/stock_adjustments.php` — no-project case was showing every warehouse instead of unassigned-only.
- ▶ `app/bms/pos/pos.php` + `pos_scripts_new.php` — POS had a `filterPosWarehousesByProject()` wired to Project selector completely disconnected from the Warehouse selector; added
- ▶ Test: `tests/test_warehouse_project_filter_cli.php` — 17 assertions (lint + source-level behaviour + live warehouse data check).

Four Migrations Existed Locally but Were Never Committed FIX

- ▶ Found 2026_06_11_crm_campaign_link.php , 2026_06_24_nssf_employer.php , 2026_06_24_payroll_v during a routine drift check:

- ▶ All four committed as-is (each already idempotent/guarded); no schema change, purely closing a commit gap.

Smaller Fixes — Payroll, Codes, DN Navigation, Deploy CI

PRs #1066, #1067, #1070, #1072, #1074 · 6 commits

Payroll Processing Failed for Every Employee (Production) PROD

- ▶ **Bug:** yesterday's process_payroll.php write 'employer_cost' breakdown payroll_items for every pa NSSF- an line into employee, but its feature migration only made added the
- ▶ **Fix:** migrations/2026_07_01_payroll_items_employer_cost.php adds the tests/test_payroll_item missing ENUM value (additive, idempotent). Checked for orphaned rows from prior failed attempts — none found. Test:

Company-Prefix Codes Never Re-Coded on Edit After Changing the Prefix FIX

- **Bug:** `codeForEdit()` only recognised PREFIX- shape *previous* company prefix fell through to a code as "auto- TYPE- but "manual code, leave alone" — so generated, NNNN stamped changing Company Profile's eligible for re-coding" if blank with a Document Code Prefix never propagated to existing records, even on edit. Shared by 16 edit endpoints (customers, suppliers, employees, quotations, sales orders, POs, vouchers, RFQ, DN, LPO, CRM leads, ...).
- **Fix:** added a second auto- tests/test_code_for_edit_stale_prefix_cli.php — proves generated shape — any prefix exactly one + TYPE + NNNN — so a stale- sequence prefix code now re-codes to number burns the current prefix on edit, same on re-code, as blank/legacy codes always zero on did. Genuinely custom codes already- current or are still left untouched. Test: genuinely- manual codes.

Outbound Delivery Note Tab/Button Leaked Into the Purchases View FIX

- `delivery_notes.php` is shared by ? . The Outbound tab and its "Create DN (Outbound)" both menus type=outbound button rendered unconditionally, letting a Purchases — Purchases user create sales delivery notes from the wrong screen. links to it Follow-up fix caught the same leak in reverse: the plain, Sales "Record DN (Inbound)" button was showing on the links with Sales outbound view too.
- Both wrapped `$is_outbound_view` check; Sales-side rendering (tabs, buttons, permission gate) left byte-for-byte identical.

Deploy CI Blocked Production After the LPO Module Merge PROD

- **Bug:** `deploy.yml` 's `api/customer/add_lpo.php` / `update_lpo.php` — both `save_lpo.php` . No "Check intentionally cov critical deleted hard API when the so i files standalone thro exist" LPO module faile gate replaced dev still them with pro listed dep #10 bloc pro
- **Fix:** removed the deleted files from the allowlist; added their replacements plus the new LPO pages and migrations so the gate reflects what the feature actually depends on.

Product Unit Field Editable Where It Should Be Locked FIX

- ▶ A product's unit (kg, lt, pcs...) is set once at registration, but several line-item forms showed it as an independently-editable field after product selection. Scouted every Procurement/Sales form with live product search: Sales Order create/edit, Quotation form, GRN create all had it editable (DN Create, DN Outbound, Invoice Create were already correct). RFQ create is the one exception left editable by design (it allows free-text non-catalog requests) — but now locks once a real catalog product is linked.
- ▶ Test: `tests/test_unit_autofill_lock_cli.php` — 24 checks.

Bug Fixes Summary

18 bugs fixed (incl. 1 security, 2 prod-blocking)

#	MODULE	BUG	SEVERITY	STATUS
1	Webroot	284 unauthenticated dev/debug scripts reachable over HTTP, several could ALTER/UPDATE prod DB	SECURITY	✓ Fixed
2	Payroll	Multi-step GL posting had no transaction — partial-paid batches possible on failure	HIGH	✓ Fixed
3	IPC / Invoicing	No transaction between invoice INSERT and IPC link — retries created duplicate invoices	HIGH	✓ Fixed
4	Warehouse Delete	Cascade not atomic; hard-deleted stock_movements, destroying audit history	HIGH	✓ Fixed
5	Stock/CRM/Config	9 remaining multi-write endpoints had no transaction	MED	✓ Fixed
6	Payroll (PROD)	"Data truncated for column item_type" — every Process Payroll run failed	PROD CRASH	✓ Fixed
7	Deploy CI	Critical-files allowlist referenced deleted LPO files — blocked production deploy	PROD BLOCK	✓ Fixed
8	CRM Dashboard	safeOutput() undefined — all three tables + mobile cards stuck on "Loading..."	HIGH	✓ Fixed
9	CRM Dashboard	Chart.js never loaded — all charts blank and tables silently unpopulated	HIGH	✓ Fixed
10	CRM Import Leads	Page + API routes never registered — 404 on the feature shipped yesterday	HIGH	✓ Fixed
11	CRM Import Leads	3 bugs once reachable: no file dialog, TypeError on empty headers, stuck upload button	HIGH	✓ Fixed
12	Warehouse Filter	3 pages (PO create, stock adjustments, POS) fell back to "all warehouses" instead of strict project scope	MED	✓ Fixed
13	Migrations	4 applied migrations existed locally but were never committed — schema drift risk	MED	✓ Fixed

#	MODULE	BUG	SEVERITY	STATUS
14	Company Codes	Changing Document Code Prefix never took effect on existing records, even on edit	MED	✓ Fixed
15	DN Navigation	Outbound tab/button leaked into Purchases view; Inbound button leaked into Sales view	MED	✓ Fixed
16	Product Unit Field	Editable in Sales Order, Quotation, GRN forms instead of locked to registered value	MED	✓ Fixed
17	LPO / Invoice	No warehouse_id column at all — stock figures fell back to non-warehouse-specific totals	MED	✓ Fixed
18	LPO (legacy)	Modal-based, no real approval workflow — replaced by standalone module	MED	✓ Fixed

Commit Timeline — 1 – 2 July 2026

24 commits

- 1 Jul  **a5e5754** **fix(crm): define safeOutput in dashboard, campaigns, leads**
Widgets stuck on "Loading" · PR #1053
- 1 Jul  **51c9d53** **feat(crm/dashboard): all three tables now DataTables with S/No column**
Sort, search, pagination + proper empty-state handling
- 1 Jul  **b3f973c** **fix(crm/dashboard): add Chart.js — charts+tables were blank**
CDN tag was missing, silently killed the whole render callback
- 1 Jul  **22929d6** **style(crm/dashboard): change table headers from black to blue**
table-primary styling to match the rest of the app
- 1 Jul  **ae34207** **fix(crm/import_leads): register missing routes in roots.php**
Page + API existed since yesterday but were unreachable — 404
- 1 Jul  **6af4d73** **fix(crm/import_leads): fix 3 bugs + 50-assertion test suite**
File-dialog loop, null TypeError, stuck upload button · PR #1055/#1057
- 1 Jul  **7c29589** **fix(migrations): commit 4 pending migrations left uncommitted locally**
CRM campaign link, NSSF employer, payroll void status, SDL reclassify · PR #1059
- 1 Jul  **956d519** **fix(warehouse): warehouse dropdown strictly follows selected project**
PO create, stock adjustments, POS · PR #1060
- 1 Jul  **01c0340** **feat: standalone Customer LPO module + LPO -> DN(Outbound) -> Invoice chain**
6 phases, 105-check test suite, Sales menu reorder · PR #1063
- 1 Jul  **6be0cd8** **fix: lock product Unit field to its registered value in line-item forms**

Sales Order, Quotation, GRN + conditional RFQ lock · PR #1066

- 1 Jul  **c404c4c** **fix: update deploy CI critical-files allowlist for LPO module changes**
Was blocking the develop→main production deploy · PR #1067
- 1 Jul  **303ce9c** **fix: hide Outbound DN tab/button from Purchases delivery notes view**
· PR #1070
- 1 Jul  **f6fbbfc** **fix: hide "Record DN (Inbound)" button on the Sales (outbound) DN view**
Follow-up to the Purchases-side fix, same PR
- 1 Jul  **394626a** **fix: add missing 'employer_cost' ENUM value to payroll_items.item_type**
Production crash — every Process Payroll run was failing · PR #1072
- 1 Jul  **fd0f376** **fix: re-code stale company-prefix codes on edit, not just blank/legacy**
Shared by 16 edit endpoints · PR #1074
- 1 Jul  **8f5356a** **feat: add project-filtered warehouse field to Customer LPO and Invoice**
· PR #1076
- 1 Jul  **94867bb** **security: quarantine 284 unauthenticated one-off scripts out of the webroot**
First version · superseded by 458b317 after rebase
- 1 Jul  **b43c568** **fix: make payroll multi-step writes atomic; convert all MyISAM tables to InnoDB**
Foundation fix underpinning the whole tx-safety sweep · PR #1079
- 1 Jul  **9ca6e6c** **fix: make warehouse delete cascade atomic and preserve stock movement history**
· PR #1080
- 1 Jul  **2257dd5** **fix: make IPC/invoice/voucher multi-step writes atomic**
Closed the duplicate-invoice-on-retry risk · PR #1081
- 1 Jul  **3da5db7** **fix: make remaining multi-write endpoints (stock/CRM/config) atomic**
Final batch — 9 endpoints · PR #1082
- 1 Jul  **72d4509** **test: financial report integrity suite (capstone of the tx-safety sweep)**
17 checks proving the ledger stays balanced through the whole sweep · PR #1083
- 2 Jul  **458b317** **security: quarantine 284 unauthenticated one-off scripts out of the webroot (#1078)**
Rebased/synced final version, merged to develop

Next Session Priorities

1

Promote develop → main (Webroot Quarantine Still Not Live)

PR #1078 (284-script quarantine + .htaccess lockdown) is merged to develop only — every other branch from today is already on main. This is the one still-open production-security gap; open the develop→main PR to

close it.

2 Verify Transaction-Safety Sweep on Production

Run `test_financial_reports_integrity_cli.php` and `assertLedgerBalanced()` against live data after deploy — confirm the MyISAM→InnoDB conversion and all seven atomicity fixes behave the same under real production load/concurrency as they did in local testing.

3 Delete scripts/legacy/ After One Stable Release

The 284 quarantined scripts are slated for permanent deletion once this release has run clean in production for a while — track this so it doesn't get forgotten.

4 Balance Sheet — Verify It Balances on Production

Carried over from yesterday: confirm $\text{Assets} = \text{Liabilities} + \text{Equity}$ on live data. If a gap appears, trace via the `money.md` checklist.

5 Expenses by Category — Tree + Rollup View

Still not started. Mockups approved, plan in `expenses_by_category_plan.md`.
